

At Top Group International we realise that the modern economy and modern lifestyles can be harmful to the environment. Our business is not only about doing business but also about thinking of the consequences of our actions in broader terms.

Part of the vision of our company is to ensure that we use every opportunity to reduce any direct or indirect impact we may have on the environment.

Our mission: To affirm our commitment to protecting the environment and express our respect for Mother Nature herself through positive action.

To this end, Top Group International has implemented programmes such as responsible waste disposal and promoting less use of cars amongst our staff and increased use of public transport, bicycles and even walking to and from work.

Some of these initiatives not only reduce the effects we have on the environment but also help to improve the health of our colleagues and better their quality of life.

In the latest development Top Group International has invested heavily in new technologies to create a Paperless Office. Our new digital environment is Eco-Friendly and shows once again that we are serious about our commitment.

It is not only a matter of cutting down fewer trees but the harmful chemicals used in the manufacture of paper and printer toners have been reduced by 99% through this initiative.
